

## Lustre Metal Polish

Our Lustre Metal Polish can be used on bare metal aluminum, stainless, magnesium copper & Chrome surfaces.

### Application instructions

Application must take place above 5 C in a well ventilated area, whilst wearing protective gloves. Do not dilute.

Surface condition is important, ensure it is free of any dirt & grit before polishing.

The polish can be applied with either a microfibre towel or foam applicator. Using your applicator, rub a thin layer of the polish into a small section of the metal until a black residue appears, The residue acts as a cleaning agent, removing oxidation whilst polishing the surface. Once the desired finish has been achieved, wipe clean with a clean soft microfibre cloth.

### Maintenance

This polish is gentle enough to be used regularly without damaging the surface. It can also be partnered with our Platinum Wheels coating to protect for up to two years.

Remove polish that comes into contact with glass, trim/tyres immediately.

Caution: Avoid contact with eyes & skin. Do not ingest. Refit cap tightly after use.
