

PDUX2B (12V) Datasheet

The PDUX2B (12V) is a high-performance solid state power distribution unit with a total of 16 powered output channels and maximum current capacity of 160A.

This includes four flexible 40A output drivers which may be configured as half bridge, high side, high side PWM (configurable frequency), with the ability to soft start electrical loads with closed loop current limitation and two 40A high side capable output drivers, with soft start capabilities.

In addition, eight 15A capable output drives, high side and high side PWM (configurable frequency) with the ability to soft start electrical loads and two 15A high side capable output drivers, with the ability to soft start electrical loads.

Using digitised, voltage, or linearised values from its 12 analogue inputs and from any of three CAN buses the PDUX2B is calibrated using a clear graphical interface with full logic simulation ability and live monitoring.

The PDUX2B is able to operate in a low power standby state, drawing <math><2\text{mA}</math>, with configurable activation based on physical or CAN input.

Additionally, the PDUX2B may be used to expand input and output functionality of any Life Racing ECU.

The PDUX2B is available in 12V, 24V and 48V variants as well as an internal IMU option as detailed in the 'Ordering Information' section.
